10. FAQs

1 Registration

IIT Bombay follows a specialized credit-based semester system, therefore registration at the beginning of each semester is mandatory for you till you complete your program (lookout for the dates in the [Academic Calendar](#)). Without registration, any academic activity (course/seminar/project, etc.) that you undergo will not be counted towards the requirements of your degree.

1.1 Pre-Registration

When: Usually held about a week before the official course registration begins. This year's dates are 10th July, 2026 - 14th July, 2026 for the Autumn Semester and 12th December, 2026 - 16th December, 2026 for the Spring Semester. Note that Pre-registration is NOT FCFS (First-Come-First-Serve).

What it covers: Minor Courses, Popular and high-demand electives (e.g., Entrepreneurship electives) and certain specific department electives.

How allocation works: Most minor courses are generally allocated based on CPI, and some others are allotted on the professor's selection criteria.

Where to pre-register: Through the External ASC portal under the Forms/Requests section. Click [here](#) for a guide video for the same.

Prerequisites: Semester fees must be paid and at least the first SMA instalment should be cleared via External ASC.

1.2 Registration

When: Happens before the start of each semester, at the end of December for the Spring Semester and end of July for the Autumn Semester.

Autumn Semester: 21st July, 2026 - 24th July, 2026

Spring Semester: 29th December, 2026 - 1st January, 2027

Where to register: Use the Internal ASC portal → go to Academics → Registration → Registration/Adjustments. Click [here](#) for a guide video for the same.

How it works:

- Courses you've already pre-registered for (like electives and minors) will be automatically added.
- You can also register for additional courses (not part of pre-registration) or any pre-reg courses that still have open slots.
- These open courses are allotted on a First-Come-First-Serve (FCFS) basis, so early action is advised.

Important Reminders:

- You must register for the semester on internal ASC before the final deadline mentioned in the Academic Calendar.
- Once submitted successfully, you'll receive a confirmation email.
- Missing the registration submission can result in your registration not being processed, so don't wait till the last moment!

1.3 Course Adjustment

Duration: Typically open for around 7-10 days after the course registration period ends. The last date for course adjustment this year is:

Autumn Semester: 3rd August 2026

Spring Semester: 11th January 2027

What you can do: Add or remove courses (generally electives, for core courses - you need the permission of your FacAd). You can make multiple changes during this

phase, but must re-submit the updated course registration form each time you make the changes.

Conditions: Your total credits should not fall below 18 or exceed the overload limit as per your category.

1.4 Dropping of Courses

If a student finds their academic load too heavy, even after the date for course adjustment has passed, they may drop some courses out of the registered ones provided the minimum credit limit for a semester (18 credits) holds. Dropping core courses requires prior consultation with your Faculty Advisor.

This year the dates are for the

Autumn Semester:

- First half-semester courses: 4th August, 2026 - 17th August, 2026
- Second half-semester courses: 21st September, 2026 - 12th October, 2026
- Full-semester courses: 4th August, 2026 - 17th August, 2026

Spring Semester:

- First half-semester courses: 12th January, 2027 - 25th January, 2027
- Second half-semester courses: 1st March, 2027 - 22nd March, 2027
- Full-semester courses: 12th January, 2027 - 25th January, 2027

1.5 Semester Wise Courses Offered

You can check a particular semester's curriculum on ASC. Follow the path: Academic -> All about courses --> Curriculum.

Kindly note: From the third semester onwards, registration is dependent on the Academic Standing of the student

2 Courses and their Categories

2.0 Theory and Lab Course Systems (LTPC)

Courses are broadly classified as Theory Courses and Laboratory Courses. Theory courses consist of lecture (L) and tutorial (T) hours, but may have attached practical

(P) hours in special cases. Laboratory courses consist of practical hours, but may have attached tutorial hours in special cases. Credit (C) for a course is obtained by multiplying the number of hours of instruction per week in that course, by two (2) for lecture and tutorial hours, and by one (1) for laboratory hours i.e. $C = 2xL + 2xT + P$. A student is expected to spend, on average, one hour every week outside class for every lecture/ tutorial held that week.

2.1 Core Courses

Core courses are those courses which you have to do compulsorily for obtaining your degree.

These courses count towards your final degree in all respects and count in your CPI (Cumulative Performance Index).

They are NOT optional and have to be completed within the stipulated duration of your coursework (4 or 5 years).

The courses give you a lot of exposure to your own departmental subjects and research.

They also have an elective component, details regarding which are explained in the section on electives.

2.2 Minor Courses

A Minor is an additional credential a student will earn if they do a minimum of 30 credits (5 courses in most cases) worth of additional learning in a discipline other than their major discipline.

Many academic units in the Institute offer minors in their disciplines and prescribe a specific set of courses and/ or other activities like projects for earning a minor in that discipline.

Note that courses equivalent in content to any of these specified courses from the same department can be taken as a minor course with the approval of the concerned HOD.

After the completion of credits under the stipulated time period, a minor degree is awarded to the student. It is mentioned in the Degree Certificate "Bachelor of Technology in xxx with Minor in yyy." The fact will also be reflected in the transcript, along with the list of courses taken.

Students are eligible to pursue a Minor starting from the 3rd semester.

Minor courses are allocated to students only through a [pre-registration process](#) before the start of every semester and the allocation for every minor course is done on the basis of the CPI of the student as the seats are limited in every minor course.

You can opt for as many courses of your choice during the process of pre-registration (in particular preference order). You will be allotted the minor course based on your (major) CPI and preference order after the pre-registration window closes.

The waitlist that is maintained for the minor courses (for students who have missed out on the course of their choice) is also sorted on the basis of the CPI of the students, such that if any student who has got the minor course drops it during the process of registration, the next student in the waitlist will get the minor course.

If a student doesn't complete the full 30 credits required for a Minor, they won't be awarded the Minor. However, any courses completed as part of the Minor will still appear on the transcript individually.

Note - The only way to get a minor is through the pre-registration window. It would not be possible to register for a minor on the main registration window.

Please refer to the [UG Rulebook](#) to check the eligibility criteria to register for minor courses.

2.3 Honours Courses

Honours is an additional credential a student will earn if they opt for the extra 24 credits (in some cases, 30) needed for this in their own discipline.

In certain departments, there are some core Honours courses that are compulsory to earn an Honours degree and some Honours elective. It is best to consult your DGSec for details on the same.

Honours courses are either advanced-level courses in your discipline or are courses designed to give you more exposure to different areas of your discipline.

This will be mentioned in the Degree Certificate as "Bachelor of Technology in xxx, with Honours" on the successful accumulation of credits at the end of the program. The fact will also be reflected in the transcript, along with the list of courses, etc., taken.

For B.Tech / B.S. students, the CPI for Honours courses is calculated separately from your Major CPI. Your grades in Honours courses will not impact your Major CPI.

There's no separate registration process for Honours. The courses you intend to count towards Honours are registered along with your regular courses on the Internal ASC

portal (but ensure that you register for them as an O tag).

Dual Degree students have to do the Honours courses by default. They are considered as their core courses. Honours courses do not count in your CPI other than for dual degree students

2.4 Electives

Every program (B.Tech/Dual degree/BS) in IIT Bombay will have its own curriculum defined, which will define your core courses and the total credit requirement for the award degree. According to your curriculum, your course completion may require doing courses of your own choice, wish and interest from

Department Electives: Students choose advanced-level courses (e.g., 4xx or 5xx) from their department. In some cases, courses from other departments may be tagged as department electives with approval from the concerned department.

Interdisciplinary STEM Elective: These courses do not have core prerequisites and can be taken as STEM electives by students from other disciplines.

Interdisciplinary HASMED Elective: Offered by departments under the HASMED umbrella (Humanities, Arts, Social Sciences, Management, and Design), these courses typically have no core prerequisites and focus on interdisciplinary themes.

Note: Electives are part of the curriculum and count towards the CPI. These do not come by default on your course registration form unlike core courses, you need to add these by yourself during registration.

2.5 Additional Learning Courses (ALC)

Apart from core courses, a student can take some extra courses. These Additional Learning Courses (ALCs) don't constitute the core CPI/SPI of a student.

The tag of such a course can be changed during the retagging period, which is explained later.

Note: Exceeding any of the criteria for credits is NOT admissible under any circumstances.

2.6 Audit Courses

- Audit courses are taken purely for learning purposes, with no credits or grade points.

- Registration for audit courses is done alongside main course registration, but requires prior permission from the instructor.
- Only Category I and II students are allowed to audit courses during regular semesters and summer terms.
- A student may audit a maximum of two courses during their entire program.
- If completed successfully, the course will be reflected on the transcript with an 'AU' grade.
- The 'AU' grade is awarded only if attendance is satisfactory and additional requirements set by the instructor are met.
- If attendance or performance is unsatisfactory, no grade will be awarded, and the student will be deregistered from the course.
- The 'AU' grade does not carry any grade point and is not included in SPI/CPI calculations.
- Audit courses cannot be retagged under any other category.

2.7 Sit Through

- Sit-through is an option for students interested in a course but unable to register due to constraints (commonly happens with popular minor courses).
- In such cases, you may seek permission from the course instructor to attend the classes without official registration.
- Sit-through courses do NOT appear on your transcript.
- Credits from sit-through courses are not counted toward your degree requirements.
- No formal registration is required or done for sit-through courses.

Type of Course	Description	Effect on CPI
Minors	30 credits worth of additional learning in a discipline other than your own major.	Don't count towards major CPI
Honours	24 (in some cases 30) credits worth of additional learning in your own discipline	Don't count towards major CPI
STEM Electives	Science, Technology, Engineering & Mathematics related courses which are mandatory to be done but are chosen based on interest	Count towards CPI

Type of Course	Description	Effect on CPI
HASMED Electives	Humanities, Arts, Sociology, Management, Entrepreneurship and Design related courses	Count towards CPI
Flexible Electives	All electives including STEM, HASMED and Department electives come under this superset	Count towards CPI
Department Electives	Advanced-level courses from your department	Count towards CPI
Additional Learning Courses (ALCs)	Any extra course, in any department, by your choice, taken up for extra learning.	Don't count towards CPI
Audit Courses	Wanting just an exposure to a course - without having to obtain a good grade - maximum of 2 audit courses in the entire period of study	Don't count towards CPI
Sit through	Sitting through a course only for exposure without registering for it	Don't count towards CPI

NOTE: All courses which count towards major CPI are compulsory to complete the minimum requirement for a degree.

2.8 Self Study Courses

Purpose: Primarily for final-year students (after 8th semester or after expiry of program duration) who need to complete mandatory credits for graduation.

Course Limit: A student can take a maximum of two courses in self-study mode.

Support:

- Professors provide study materials.
- Doubt-clearing sessions are conducted.
- Exams are held and normal grading policies apply, same as regular courses.

Registration Process:

- Submit the [Self-Study Form](#) to the respective department office.
- After submission, you will receive an email from the Academic Office with payment instructions.
- Visit the Academic Office (Main Building, 2nd floor) to generate a payment request.

- Make an offline payment at the Cash Section by showing the payment request.
- Submit the payment receipt back to the Academic Office.
- Once processed, the course will appear on the ASC portal.

Fees:

- ₹2000 per course for General/OBC/EWS students.
- ₹1000 per course for SC/ST students.

Duration: Typically runs from the second week of May to the second week of July.

Evaluation: Aligned with the academic calendar and treated at par with regular semester courses (whether in summer or normal terms).

2.9 Guided Study Courses

Purpose: Primarily for final-year students (after 8th semester or after expiry of program duration) who need to complete mandatory credits for graduation.

Course Limit: A student can take a maximum of two courses in self-study mode.

Support:

- Professors provide study materials.
- Doubt-clearing sessions are conducted.
- Exams are held and normal grading policies apply, same as regular courses.

Registration Process:

- Submit the [Self-Study Form](#) to the respective department office.
- After submission, you will receive an email from the Academic Office with payment instructions.
- Visit the Academic Office (Main Building, 2nd floor) to generate a payment request.
- Make an offline payment at the Cash Section by showing the payment request.
- Submit the payment receipt back to the Academic Office.
- Once processed, the course will appear on the ASC portal.

Fees:

- ₹2000 per course for General/OBC/EWS students.
- ₹1000 per course for SC/ST students.

Duration: Typically runs from the second week of May to the second week of July.

Evaluation: Aligned with the academic calendar and treated at par with regular semester courses (whether in summer or normal terms).

2.10 Summer Courses

Students with backlogs can register for summer courses. If registering for 2+ backlog courses, they may also take 1 course in advance. A maximum of 24 credits (typically 4 courses) is allowed, except for extension students who can take more if available.

Minimum 80% attendance is mandatory; falling short results in an FR grade. Courses can be dropped within 7 days of the first lecture.

Register via Internal ASC under “Registration/Adjustments.” Pay ₹9000 per course through External ASC under “Payments.” No offline process is needed.

Check Internal ASC (select semester) for available courses. All relevant dates and procedures are listed in the academic calendar.

2.11 NPTEL / SWAYAM Courses

Credit Limit: Students can complete up to 2 elective courses (max 12 credits) via [NPTEL](#). Extension/ARP students may take up to 24 credits (core and elective) with DUGC recommendation.

Credits & Grading: A 12-week course equals 6 credits, while 8-week courses equal to 3-4 credits. Grades for NPTEL courses are awarded out of 100 and are not included in CPI calculations.

Enrollment Process: Submit an NPTEL Course Mapping Request Form signed by Faculty Advisor and course instructor to the DUGC via the General Secretary (GSec) for approval.

Registration & Fee: After approval, register and pay ₹1000 on the [SWAYAM](#) portal for the course exam.

Completion Formalities: On passing the exam, submit the printed certificate and the signed NPTEL form to DUGC via GSec. It will then be forwarded to the Academic Office for ASC entry under course code O-IITB.

Timelines: Refer to the SWAYAM portal for all deadlines and follow them strictly.

Here are some [FAQs](#) for detailed guidance.

2.12 Seminars

A Seminar is a 3-credit course where, under the supervision of a faculty member, the student conducts an in-depth study on a specialized topic.

This involves surveying relevant technical literature, gaining an understanding of various aspects of the problem, and synthesizing the findings.

The student is expected to compile the insights into a written report and deliver an oral presentation before a designated committee of faculty members.

2.13 IR Language Courses

International Relations (IR) language courses are the courses that are offered for the benefit of students as well as staff of IIT Bombay.

These courses are offered in many languages such as Japanese, French, Spanish and Chinese.

These courses are separately run and have no relation to credits/grades.

You can contact the Institute Secretary International Relations (ISIR - UG) for more details about the IR language courses. Reviews for these courses can be found [here](#).

3 Why Should One Take Up a Minor

Minor courses allow you to officially explore a department other than yours while at the same time getting credit for it. It adds value to your major degree and can be a gateway to get opportunities in the field you have completed your minor in.

Your minor degree can give you sufficient knowledge to enable you to take part in interdisciplinary research and even pursue your higher studies in such fields.

Though a minor degree can be pursued simply out of genuine and deep interest in a particular department without any specific end goal in view, for the general majority, you should select it in such a way that it either suits your major degree in a research-oriented interdisciplinary manner or in a generic way to any engineer or scientist.

You should also look at how all the minor courses fit in with each other for a more holistic approach; some departments draw up a suggested schedule of when each minor course must be taken to reap the full benefits out of the curriculum.

Minor courses don't count in your CPI, so you should select a minor based on your interest.

4 Why Should One Take Up an Honours

Honours courses are either advanced-level courses in your department or are courses designed to give you more exposure to different areas in your department. It is like a specialization in your own discipline..

Honours research topics are varied and negotiable - if you are really interested in a topic and want to learn more about it, you'll be encouraged and supported.

From a potential employer's perspective, whatever your department, it appears laudable to have demonstrated the ability to achieve a complex and demanding goal and have in-depth knowledge in your department.

It helps you prepare for higher studies or to take a job in a particular specialized area so that you can compete with, say, an M.Tech who has specialized in the same area; there are also higher chances that your profile will get noticed by universities for their MS/Ph.D. programs..

5 Tagging Rules

Every course you do in the institute falls under one of the categories of courses as described in section 1. Tags are given to courses to classify them. The tags of electives can be changed as per the rules that follow.

This facility allows students to do additional courses and finally make select courses count towards 'Core CPI' (the CPI of prescribed curriculum credits)

Rules:

Re-tagging will be available to students ONLY TWICE in their entire program duration, the first time before placements (Second Last Semester Starting) and second time post curriculum completion (Last Semester).

Note:

- **For students who convert to the IDDDP/Dual Degree Programme after the 6th semester, eligibility for retagging depends on whether they avail the retagging window available after their 6th semester. If they do not use this opportunity, they will remain eligible to retag after their 8th and 10th semesters. However, if they avail the retagging window after the 6th semester (prior to conversion),**

they will have only one retagging opportunity remaining, which will be after their 10th semester.

- **For students enrolled in the Dual Degree Programme from the beginning, retagging is available only after their 8th and 10th semesters. They are not eligible to avail the retagging window after their 6th semester.**

Tags of courses:

- Core Course - C
- Department Elective - D
- Interdisciplinary STEM Elective - SE
- Interdisciplinary HASMED Elective - HE
- Minor Course - M
- Additional Learning Courses - T
- Honours Course - O

An approved change of tag will result in fresh calculation of SPI/ CPI from the semester. The tag change has been made effective due to the fact that additional learning course(s) do NOT constitute the core SPI/ CPI of a student.

Following is a table specifying the current rules about the changing of tags from one to another and the restrictions put on the same:

TAG CODE	TAG DESCRIPTION	CHANGEABLE INTO
T	Additional Learning Course(ALC)	SE, HE, O, M
C	Core Course	C
D	Department Electives	T,O
SE	Interdisciplinary Stem Electives	T,M
HE	Interdisciplinary Hasmed Electives	T,M
O	Honours Course	T, D
M	Minor Course	T, SE, HE

Please check for the updated retagging rules here before making any decision as these are subject to change.

NOTE:

- These retagging rules are not applicable for all courses. It is advised to talk to the course instructor or a senior before you take up a course. For a lot of courses, the instructors do not allow retagging.
- The Institute Elective (I) tag has been discontinued. Do not tag any course as "I" during registration, as it may create issues with your graduation requirements.
- For any special requests i.e. a change, which cannot be implemented on the tagging interface, the student has to get approval from the HOD of the concerned department (other department in case of minors).

6 Research

6.1 Supervised Learning Project (SLP)

Supervised Learning Project (SLP), also known as RnD in some departments, is a project-based course - generally for 6 credits, where a student can work for one entire semester on a project under a professor.

It is not always necessary to do a project under a professor in your department.

The professor you choose can be from a different department, but it is subject to rules and conditions laid down by your department.

6.2 B.Tech. Project

B.Tech. projects (BTPs) may be offered as a single unit of 12 credits (BTP) or as 6 credits of BTP-I followed by BTP-II of 6 credits or 12 credits.

Wherever it is split into two units, BTP - I becomes a pre-requisite for BTP - II.

Departments may prescribe a minimum performance in BTP - I (which may be higher than the pass grade 'DD') for being eligible for BTP - II.

BTP - I and BTP - II are separately graded, at the end of the respective semesters.

These projects are supervised, and need regular interaction (at least once a week) with the supervisor.

Students have to submit a project report and present it in front of a panel of examiners.

The dates for submission of reports, the dates for presentations, and details of mode of assessment are decided by the individual departments.

Both BTPs are counted in CPI calculation.

6.3 Undergraduate Research Awards (URA)

The Undergraduate Research Awards (URA) is a program designed for students with a strong inclination toward research. It aims to recognize and document their research and developmental efforts at three levels: URA01, URA02, and URA03. Each award is independent and reflects the student's contributions and achievements. These awards are listed in the Transcript.

URA 01

- For preliminary research/ developmental experience for any 1st/2nd /3rd year UG students.
- You need to take prior approval from DUGC with a signed application by the guide.
- Upon completion of the project (4-6 months including summer/winter vacations) you need to fill the URA 01 form and submit it to DUGC via GSec.
- Form link: [URA 01](#)
- No credits are given for this, it just appears on the transcript with a PP grade in the immediate next semester.

URA 02

- Recognition of truly exceptional work, both in quality and in extent, done in the BTP, is only for B.Tech students, not for DD students.
- Additional 6 credits with an AA is given for URA 02. Hence, it will improve your CPI.
- You compulsorily need to do two BTPs one in 7th and another in 8th semester.
- Your work will be evaluated by a committee formed by the DUGC and then the recommendation is sent to the UGAPEC.
- After BTP 2 you can apply for URA 02 by filling the form and submitting it to the DUGC via GSec.
- Form link: [URA 02](#)

URA 03

- Recognition of truly exceptional work, both in quality and in extent, done in the DDP.
- Only for DD students.

- You compulsorily need to do two DDPs one in 9th and another in 10th semester as DD requirements.
- Additional 6 credits with an AA is given for URA 03. Hence, it will improve your CPI.
- Your work will be evaluated by a committee formed by the DUGC and then the recommendation is sent to the UGAPEC.
- After DDP 2 you can apply for URA 03 by filling the form and submitting it to the DUGC via GSec.
- Form link: [URA 03](#)

7 Intro to IDDDP

The Interdisciplinary Dual Degree Program (IDDDP) is an academic initiative that allows undergraduate students to pursue an additional master's degree in a specialized interdisciplinary area by extending their studies by one year. This program enables students to combine their core undergraduate discipline with advanced knowledge in an emerging or allied field.

For the full guide, including who it suits, its benefits and the IDDDP Booklet, head to [The IDDDP Corner](#).

8 Intro to Semester Exchange

The Semester Exchange Program at IIT Bombay is a chance to study abroad for one semester at one of IIT Bombay's partner universities. IIT Bombay signs Memoranda of Understanding (MoUs) with various institutions worldwide, many of which facilitate academic exchanges. MoUs lay the groundwork for how these will work - student eligibility, departments/schools and so on.

Spending a semester abroad has several advantages:

- Study at top international universities
- Take unique courses not offered at IITB
- Exposure to different cultures and perspectives
- Build a global network of friends and contacts

- Improve soft skills like adaptability, independence, communication
- Learn how academics and research work in other countries
- Students who go on to tertiary studies find themselves more comfortable in 'foreign' environments.
- Prospective employers in almost every field look favorably upon experience gained while living overseas and knowledge obtained of another language and culture.
- Increased pressure to communicate and relate to others develops an awareness of group dynamics and personal sensitivity towards others.
- Successful program completion represents an excellent measure of personal flexibility, encompassing an ability to reach compromise, focus and succeed through challenging times.

For more info about the Semester Exchange Program (Eligibility, timeline, list of universities etc.) please visit the official [IITB International Relations Website](#).

9 Reviews

Reviews are written by students to help you decide which minors and courses to take. The reviews are individual opinions of the respective students and are shared only as a basis for your decision. Click a department below to open its minor reviews.

10 FAQs

+ If I get an FR Grade in a minor course, do I need to repeat the course? And will it reflect in my final transcript?

+ What's the difference between an ALC, Audit and sitting through a course?

+ If one gets an FR in Elective HS *xxx*, do they need to repeat the same course or can they take up Elective HS *yyy* in its place?

+ What about the credits when one does some Honours courses but not enough for an Honours degree?

+ Suppose I take up any other random subject course, but I don't want to get a minor; will that course show up anywhere while passing out?

+ Can I take a minor course through the main registration window?

+ Can I take a course which is ONLY running as a minor course as an elective course?

+ Where can I see the waitlist of a pre registered course?

+ Can I go back to my lower preference if I got my higher preference and I didn't freeze my lower preference?

+ Can I register for a course in the FCFS waitlist in the main registration window of a minor course which is offered through pre registration?

+ A course has a prerequisite, but not mentioned on ASC.

+ How many preferences can I fill in the pre registration window? Till when can I change it?

+ How do I figure out which courses are allowed by my department as department or institute electives?

+ How do I know which courses are running as minor courses?

+ One of the minor courses is available but I am still not able to register for it through the main registration.
